

Kidder Custom Tooling

Kidder offers complete custom toolmaking capabilities. If you can dream it up, we can usually make it!

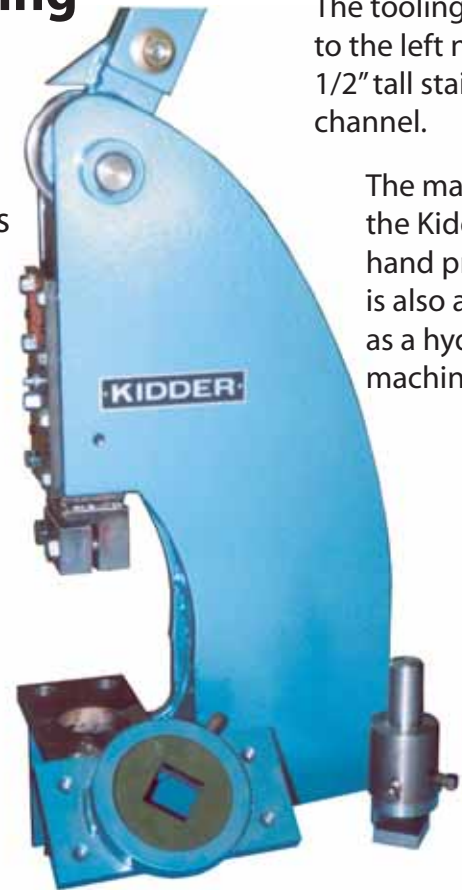

A real advantage to using Kidder to provide custom solutions is that we can usually use our standard machines and customize just the tooling. This saves quite a bit of money.

This tooling provides for an 18.4 degree notch

The tooling shown to the left notches 1/2" tall stainless channel.

The machine is the Kidder 56B hand press. This is also available as a hydraulic machine.

This tooling shears 5/16" x 1/2" .035" stainless. There is no distortion on either side of cut. Please note the spring loaded hold downs.

All the tooling shown above uses standard kidder punch and die holders.
