

# Hydraulic Utility Press P-710

## A Press for all Shops

The model P-710 is an ideal utility press for short runs where a variety of hole sizes and shapes is the rule. Outside die diameter is a large 3-7/16 inches permitting a round hole size of 2-1/2 inches - or a square up to 1-11/16 inches. Of course irregular shapes are also available - anything which will fit into a 2-1/2 inches round.

## Easy to Set Up - Easy To Use

The punch slides directly into the ram and is held by one set screw. A unique adjustable die ring mechanism permits extremely accurate punch and die alignment by use of spring loaded set screws.

A twin foot switch - one for up, one for down - means that the punch may be stopped in any position and jogged up or down.

Back and side gauges (standard equipment) are calibrated both in inches and metric. Positive action locking handles require only 1/4 turn - and are adjustable in any position. The machine is very simple and very effective.

Since the entire stroke is powered, putting shear on the punch allows punching of holes considerably beyond the rated capacity of 7 tons. Most users, utilize only part of the stroke, thereby increasing speed.

## Specifications

Throat Depth	10 Inches
Capacity	7 tons
Stroke	1-5/8 inches
Cycles per minute, full stroke round trip	10/min
Speed of ram travel	.54"/sec
Hydraulics	2800 psi
Electrics	120 VAC, 15 Amp
Controls	Double Guarded Foot Switch
Shut Height - Open	4-1/16 inches
Stand	Angle Iron - includes hydraulics and electrics
Gauging	Back and side, independent with 8" scales
Height - with stand	54 inches

- **Versatile and compact**
- **Up to 2-1/2" round in 16 gauge mild steel**
- **Rounds, squares, ovals, rectangles, multiple holes, irregulars**
- **Back and side gauging standard**
- **Ideal for short run, complex fab - a craftsman's machine**
- **Hands free jog type hydraulics**
- **Stop "on a dime" reverse or go on**
- **Made in the USA**
